The main objective of this manuscript is to suggest a link between gravity and molecules, thereby paving way towards Grand Unification of the Four Fundamental Forces of Nature through Astrology. Among the four fundamental forces – electromagnetic, strong, weak (electro weak) and gravity – the first three, namely electromagnetic, weak and strong forces have been integrated. In contemporary Physics it had been difficult so far to link gravity to the other forces which operate at atomic levels. It is in this context that the present work is attempted.

Astrology has been and is still being considered a non-science with its empiricability and beyond comprehensive rationality besides being an enigma to Science, which relates motions of planets are related to the lives of human beings. On the contrary, astrology deals with many aspects of science from genetics to fundamental physics, awaiting revelation, the impact would usher in a new world.

Among the other things, astrology deals with heredity. Earlier, Michel Gauquelin [1], a French Astrologer, had worked out that, in a large number of charts (describing positions of the planets along with Sun and Moon at the time of birth of an individual) of parents and their children, some interesting similarities can be found in terms of certain unique planetary combinations and/or their positions. A few planets, are found to be in either similar positions or in similar combinations in the charts of parents and their children. Similarities in position of Sun and Moon and the other planets - Mercury, Venus, Mars, Jupiter and Saturn - in the charts of parents and children are not
coincidences. If the planets do not have a genetic correlation, this above ‘inheritance’ will not occur.

Gravity *per se* cannot have any effect on objects like human bodies. In this connection, Dr. Percy Seymour [2], a renowned researcher on Magnetism of Planets and Sun, had attempted to show in 1990, that planets and human beings could be related through the variations in the magnetic field of sun. Gravitational forces of planets could cause perturbations in the magnetic field of the Sun, leading to variations in Solar Wind, which continuously bombard the earth. In other words, Sun amplifies the gravitational effects of the planets in the form of magnetic field variations that are then transmitted to the earth through solar winds, affecting the foetus at the time of the child’s by virtue of its genetic make-up. However, this is an indirect correlation and remains to be proved beyond doubt.

As planets are always considered in conjunction with the background space, the planets could serve as lensing media for the ever so ubiquitous dark matter and dark energy permeating our space, to be focused to earth and sun. Although it is now known that Quantum Gravity with its Singularity in Black Holes and gravity affecting vast stretches of dark matter operate at inconceivable levels involving huge masses, the implications of the same at the molecular levels especially those that are carbon based are still far from comprehension. Unifield Field Theory and its related String, Superstring and recently Brane and M Theories are still contemplating on 10-32 or more dimensional universe with four dimensions of space and time and the remaining probable hidden dimensions [3-12]. Astrology could probably hold key to the latter if explored without
any bias. Astrology thus could link huge masses of planets on one hand and the genetic make-up of human beings, on the other.
